 Involving customers in the development and production of new services becomes a powerful force across many creative industries. Customers can directly supply the firm with innovative ideas, provide skilled labour, and act as a powerful force in marketing. Firms across the world, as they seek to innovate and to better respond to market needs, begin to recognize the benefits stemming from customers' involvement in their operations. Co-creation also becomes more prevalent as customers begin to expect it from firms - seeking to influence their favourite services or products, and to

have them better tailored to their needs. Nevertheless, empowering the customers and involving them in the internal affairs of a firm is both difficult and risky. Despite co-creation becoming increasingly important to firms, very few accounts of it exist and many firms fail. Therefore, to navigate those straits, and to reap the benefits of co-creation, requires knowledge and more complete understanding of socio-cultural forces underpinning it. By studying a wide array of videogames firms in the USA and Europe, this book provides a unique insight into co-creation. It builds on the existing theories to provide unified framework for understanding co-creation in creative industries and other sectors. It combines insights from the dynamics of customer communities, with firm's perspective on innovation management

and organizational transformation. The book offers highly detailed insights into the industry, which is at the forefront of co-creation. Furthermore, it sheds new light on the videogames firms and their operations and is therefore ideally designed for researchers, educators, and students alike in the fields of knowledge management, innovation management, firm strategy, organization studies and creativity management.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." - an excerpt

The three volumes of Language typology and syntactic description offer a unique survey of syntactic and morphological structure in the languages of the world. Topics covered include parts of speech;

passives; complementation; relative clauses; adverbial clauses; inflectional morphology; tense; aspect and mood; and deixis. The major ways these notions are realized u=in the languages of the world are explored, and the contributors provide brief sketches of relevant aspects of representative languages. Each volume is written in an accessible style with new concepts explained and exemplified as they are introduced. Although each volume can be read independently, together they provide a major work of reference that will serve as a manual for field workers and anyone interested in cross-linguistic generalizations.

Information systems are virtual systems that enable the organization, storage and creation of information which can be accessed and manipulated in an easy and effortless manner. This book on information systems discusses topics related to the processes and protocols involved in information storage and retrieval. Communication is the major field in which information systems are involved as these require rapid processing of large quantities of data as well as its storage, retrieval and manipulation. This book traces the progress of this field and highlights some of its key concepts and applications. A number of latest researches have been included to keep the readers up-to-date with the global concepts in this area of study. It aims to serve as a resource guide for students and experts alike and contribute to the growth of the discipline.

Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing. The Web is merging with a variety of technologies: cell phones, laptop computers, hand held organisers, information appliances, and GPS and other sensors. The capability for access anytime and anywhere is here. The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access. Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices. We have proposed a general technique that promises to assist in mediating access. It capitalises on advantages afforded by computation(Hollan & Stometta, 1992). We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues, which at first may seem unrelated but in fact have much in common, arise in other contexts. One such activity, gaining immediate access, is currently of growing importance because of expanding connectivity via wireless technology. Cell phones and related technologies make it possible to be constantly available for synchronous interaction. At times, this can be

advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users.

This book details the vision of interspirituality within a comprehensive and powerful synthesis of world religions and spirituality, the discoveries of modern science, and the developmental and evolutionary view of history. It is the first book to review and predict the ongoing history of world religions and spirituality in the context of developmental history, the evolutionary consciousness movement, and current scientific understandings of anthropology, human cognitive development, brain/mind and scientific consciousness studies. This book addresses Brother Wayne Teasdale's vision of "The Interspiritual Age," a vision that parallels the equally well-known and publicized visions of the world's developmental and evolutionary consciousness movements (known therein as coming "Integral Age" or "Age of Evolutionary Consciousness") and the international humanist movement (known therein as the emerging "international Ethical Manifold"). As such The Coming Interspiritual Age is the first synthesis of interfaith and interspirituality with the popular writings of integral leaders Ken Wilber and Don Beck. The book includes provocative sections regarding the inherent unity within the world's religious and spiritual understanding (especially their shared mystical understandings), the relationship of these and modern scientific studies of consciousness and brain/mind, the developmental and evolutionary views of history, the inevitable ongoing processes of world globalization and multiculturalism, the emergent understanding of the Divine Feminine, the nature of spiritual experience and the reputed spirit realms, and the various predictions around and surrounding the year 2012. The book concludes with extensive "how-to" sections regarding the development and practice of interspirituality as it can happen both within the world's current religious traditions as well as in new, creative and entrepreneurial settings worldwide.

This is a new edition of the classic textbook on marine protected area (MPA) management in the tropics, originally produced as an output of the Bali World Parks Congress in 1982. Approaches to planning and managing MPAs have evolved considerably. Major advances include innovative financing mechanisms, partnerships with the private sector and NGOs, and collaborative management between government and coastal communities. These advances have brought new approaches for MPA establishment and management that are more participatory, involving communities through interaction and collaboration rather than prescription. With new case studies and illustrations, the guide comes in a water-resistant cover for field use. It is intended for those who plan individual and/or national MPA systems and gives philosophical context for MPAs along with some basic principles and approaches.
