Engaging Extremists Springer  
What is this book about? This book is about an exciting journey to Troy, both ancient and modern. About the fact that the Trojans defeated the Greeks (not the other way around, as is commonly believed). And that the well-known Greek religion with its anthropomorphism was created artificially for political reasons. The authors assert that the information warfare, the falsification of history — is not an innovation, but the oldest essence of Western way of thinking. The book refutes the conventional wisdom that "history is written by the winners." On the contrary, authors have shown: those who write history become winners. The book is written in bright, vivid and interesting manner for laymen. At the same time it is absolutely scientific and opposed fancy sensational historical fast food. This book is about the struggle for

historical truth and justice, which roots us in the world, because without the truth we are orphans.

In an effort to challenge the ways in which colonial power relations and Eurocentric knowledges are reproduced in participatory research, this book explores whether and how it is possible to use arts-based methods for creating more horizontal and democratic research practices. In discussing both the transformative potential and limitations of arts-based methods, the book asks: What can arts-based methods contribute to decolonising participatory research and its processes and practices? The book takes part in ongoing debates related to the need to decolonise research, and investigates practical contributions of arts-based methods in the practice-led research domain. Further, it discusses the role of artistic research in depth, locating it in a decolonising context. The book will be of interest to scholars working in art history, design, fine arts, service design, social sciences and development studies.

Since the 1960s, the Native peoples of northeastern Canada, both Inuit and Innu, have experienced epidemics of substance abuse, domestic violence, and youth suicide. Seeking to understand these transformations in the capacities of Native communities to resist cultural, economic, and political domination, Gerald M. Sider offers an ethnographic analysis of aboriginal Canadians' changing experiences of historical violence. He relates acts of communal self-destruction to colonial and postcolonial policies and practices, as well as to the end of the fur and sealskin trades. Autonomy and dignity within Native communities have eroded as individuals have been deprived of their livelihoods and treated by the state and corporations as if they were disposable. Yet Native peoples' possession of valuable resources provides them with some income and power to negotiate with state and business interests. Sider's assessment of the health of Native communities in the Canadian province of Labrador is filled with potentially useful findings for Native peoples there and elsewhere. While harrowing, his account

also suggests hope, which he finds in the expressiveness and power of Native peoples to struggle for a better tomorrow within and against domination.

This book examines prominent issues in the Emerging Markets (EM) from a variety of disciplines in order to make useful societal contributions through knowledge exchange. EMs offer enormous opportunities, but realizing them is both challenging and risky due to inherent uncertainties of such markets. EM's also have unique characteristics that makes them different from developed countries. This causes implications for both theory and practice. These markets necessitate substantial adaptations of developed theories and approaches employed in the Western world. This book investigates problems specific to emerging markets, and identifies new theoretical constructs, hypotheses (re)development, and emphasizes institutional contexts. The chapters in this book establish new conceptual and theoretical paradigms from multidisciplinary perspectives concentrated in the areas of information systems, electronic government, and digital and social media matters. The book focuses on topics in these areas such as digital enterprises, sustainability, telemedicine, and Information Communication Technology (ICT) and surveys the potential challenges and opportunities that may arise. These concepts and topics covered in this book are vital for making the global economy more equitable and sustainable.
