This book explores the benefits to online

teaching incorporating extended reality technologies both from a teacher's and from a students' perspective. As we are all aware, the COVID-19 pandemic has created a worldwide lock down which is clearly visible in individuals' shifting behaviour as they are keeping away from public contact, large events, weddings, places of worship, public transportation, restaurant, flights, shopping malls, etc. People across the world have adopted to Work From Home (WFH)

concept using digital technology. They are teaching, learning, conducting meetings, seminars, etc., using digital medium. As people were not allowed to go out and buy things, online shopping was in demand and extensible reality helped in marketing the products and customers could also have a better shopping experience. Gaming industry has always brought in many new games for children and adults. Healthcare sector also leveraged the benefits of this technology

to the fullest extent. The use of augmented and virtual reality in art and museum is also highlighted. Our book presents the different sectors that have benefitted using this technology during this time of crisis. This book will be very useful for students, professionals and researchers working in the area of virtual, augmented or mixed reality. Our aim is to bring out the use of this technology during the COVID-19 pandemic so that the readers are

exposed to the various applications of this technology.

Are games the knowledge-producers of the future? Imagine if new knowledge and insights came not just from research centers, think tanks, and universities but also from games, of all things. Video games have been viewed as causing social problems, but what if they actually helped solve them? This question

drives Karen Schrier's Knowledge Games, which seeks to uncover the potentials and pitfalls of using games to make discoveries, solve real-world problems, and better understand our world. For example, so-called knowledge games—such as Foldit, a protein-folding puzzle game, SchoolLife, which crowdsources bullying interventions, and Reverse the Odds, in which mobile game players analyze breast cancer data—are already being used by researchers

to gain scientific, psychological, and humanistic insights. Schrier argues that knowledge games are potentially powerful because of their ability to motivate a crowd of problem solvers within a dynamic system while also tapping into the innovative data processing and computational abilities of games. In the near future, Schrier asserts, knowledge games may be created to understand and predict voting behavior, climate

concerns, historical perspectives, online harassment, susceptibility to depression, or optimal advertising strategies, among other things. In addition to investigating the intersection of games, problem solving, and crowdsourcing, Schrier examines what happens when knowledge emerges from games and game players rather than scientists, professionals, and researchers. This accessible book also critiques the limits and implications of games and considers how they may

redefine what it means to produce knowledge, to play, to educate, and to be a citizen.

This book will help develop coping skills through arts and language-based activities.

The strategies suggested build on children's existing knowledge and skills to enhance their learning, and will all contribute to:

- improving all children's emotional health and creativity
- developing resilience, particularly in periods of high stress such as transition from preschool to school
- increasing children's capacity to cooperate, respect and play with others

The authors also explain how to identify children at risk, particularly those experiencing anxiety or

delay in social and emotional development, so that parents and practitioners can intervene early where difficulties exist.

Practitioners and parents of children aged 3-8 will find a treasure trove of activities to build coping and self-esteem through creative play and imagination.
