Physics-vol-I Bushra Arshad

This book is a collection of 954 multiple-choice questions in waves, thermodynamics, electricity, and

magnetism. These questions have been given, over couple of years, to the students of General

Physics II course (Phys102) at King Fahd University of Petroleum and Minerals. They are organized

according to the sections of Phys102 textbook: Fundamental of Physics by Halliday, Resnick and

Walker, 6th edition. This collection might be very helpful for students preparing for exams in

Phys102 or similar courses. We advise students strongly to study and understand the course

material very well before attempting practicing some of these questions. Instructors might also find

this book a valuable source for questions that can be used in examples or tests. The statistics

provided with some of the questions might be very valuable in comparing performances. العبيكان

Written for the full year or three term Calculus-based University Physics course for science and engineering majors, the publication of the first edition of Physics in 1960 launched the modern era of Physics textbooks. It was a new paradigm at the time and continues to be the dominant model for all texts. Physics is the most realistic option for schools looking to teach a more demanding course. The entirety of Volume 2 of the 5th edition has been edited to clarify conceptual development in light of recent findings of physics education research. End-of-chapter problem sets are thoroughly overhauled, new problems are added, outdated references are deleted, and new short-answer conceptual questions are added.
