Knopf Books for Young Readers

This textbook covers all the standard introductory topics in classical mechanics, including Newton's laws, oscillations, energy, momentum, angular momentum, planetary motion, and special relativity. It also explores more advanced topics, such as normal modes, the Lagrangian method, gyroscopic motion, fictitious forces, 4-vectors, and general relativity. It contains more than 250 problems with detailed solutions so students can easily check their understanding of the topic. There are also over 350 unworked exercises which are ideal for homework assignments. Password protected solutions are available to instructors at www.cambridge.org/9780521876223.

The vast number of problems alone makes it an ideal supplementary text for all levels of undergraduate physics courses in classical mechanics. Remarks are scattered throughout the text, discussing issues that are often glossed over in other textbooks, and it is thoroughly illustrated with more than 600 figures to help demonstrate key concepts.

Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors

research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

From author Adam Rex comes the first book in the Cold Cereal Saga—a hilarious, clever, and action-packed adventure series with an educational hook. Scottish Play Doe—aka Scott—is used to being a little different.

Sometimes he hallucinates things no one else can see. But then one of these hallucinations tries to steal Scott's backpack, and he comes face-to-face with an honest-to-goodness leprechaun named Mick who's on the run from, of all things, the Goodco Cereal Company. With the help of his friends Erno and Emily, Scott and Mick uncover Goodco's sinister plans—and take the first steps in saving the world from the evil cereal company. Like the *Artemis Fowl Series* and the *Percy Jackson and the Olympians Series*, the *Cold Cereal Saga* takes elements of familiar mythology—in this case, Arthurian legend and Irish folklore—and reimagines it in the modern world with a cast of relatable characters and myriad magical beings. The story is told from multiple points of view, and there are dozens of illustrations—including "commercial breaks"—and stories within the story. Supports the Common Core State Standards

Where the Connecticut River empties into Long Island Sound, a community that eventually became known as Lyme was settled in 1639. The community ran up the eastern riverbank to what is now East Haddam, along the Sound to Niantic, and into parts of Salem. In time, Lyme was divided into small towns and

villages: Old Lyme, Lyme, Hadlyme, Hamburg, Sterling City, South Lyme, and the coastal communities. Old Lyme, Lyme, and Hadlyme is a compelling tribute to an area that is extraordinary in many ways: for its people, many of whom were attorneys, judges, legislators, and governors; for its commerce, which brought ships from up and down the East Coast and as far away as the West Indies; and for its beautiful homes, some of which survive today thanks to a strong preservation ethic.

The Image of the City Harper Collins
#1 NEW YORK TIMES BEST SELLER • At last, a book that shows you how to build—design—a life you can thrive in, at any age or stage. Designers create worlds and solve problems using design thinking. Look around your office or home—at the tablet or smartphone you may be holding or the chair you are sitting in. Everything in our lives was designed by someone. And every design starts with a problem that a designer or team of designers seeks to solve. In this book, Bill Burnett and Dave Evans show us how design thinking can help us create a life that is both meaningful and fulfilling, regardless of who or where we are, what we do or have done for a living, or how young or old we are. The same design thinking responsible for amazing technology, products, and spaces can be used to design and build your career and your life, a life of fulfillment and joy, constantly creative and productive, one that always holds the possibility of surprise.

CI/ASCE Standard 38-02 presents a credible system for classifying the quality of utility location information that is placed in design plans. The Standard addresses issues such as: how utility information can be obtained, what technologies are available to obtain that information; how that information can be conveyed to the information users; who should be responsible for typical collection and depiction tasks; what factors determine which utility quality level attribute to assign to data; and what the relative costs and benefits of the various quality levels are. Used as a reference or as part of a specification, the Standard will assist engineers, project and utility owners, and constructors in developing strategies to reduce risk by improving the reliability of information on existing subsurface utilities in a defined manner.

For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

No single human invention has transformed war more than the airplane—not even the atomic bomb.

Even before the Wright Brothers' first flight, predictions abounded of the devastating and terrible consequences this new invention would have as an engine of war. Soaring over the battlefield, the airplane became an unstoppable force that left no spot on earth safe from attack. Drawing on combat memoirs, letters, diaries, archival records, museum collections, and eyewitness accounts by the men who fought—and the men who developed the breakthrough inventions and concepts—acclaimed author Stephen Budiansky weaves a vivid and dramatic account of the airplane's revolutionary transformation of modern warfare. Gene therapy has the potential to be a tailor-made therapeutic with increased specificity and decreased side effects that can offer a "cure" for many disorders. The aim of this book is to provide up-to-date reviews of the rapidly growing field of gene therapy. Chapters cover a large range of topics including methods of gene delivery, and identification of targets with several papers on cancer gene therapy. If more people become aware of the true nature and potential of gene therapy, perhaps we can achieve the full benefit of such an innovative approach for the treatment of a range of diseases, including cancer.

Leave Home Without It... Membership has its privileges, but it also has a huge share of disadvantages. Without the proper know-how and guidance, you could find yourself buried beneath an

avalanche of credit card debt. Millions of Americans are just like you and are currently attempting to pay off \$450 billion to credit card companies. It's in a credit card company's best interest to keep you in debt—after all that's how they make their real money. Even by following their rules, you can quickly be put at a disadvantage. It seems as if there is no light at the end of the tunnel—that is, until now. And All That Goes With It Whether you are overwhelmed by credit card debt or trying to prevent it altogether, Credit Card Debt has the answers. The author's basic three-step program provides the information you need to reduce interest rates, eliminate fees, and negotiate with credit card companies to keep your credit report clean. Uniquely designed to help you organize, analyze and reduce your debt, this book helps you understand how credit card companies make their money, how credit cards work, and how to use them responsibly.

What determines the interests, ideologies, and alliances that make up political parties? In its entire history, the United States has had only a handful of party transformations. First to the Party concludes that groups like unions and churches, not voters or politicians, are the most consistent influences on party transformation.

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.
