SHELDON MELTON

Handbook of Indigenous Peoples' Rights
MDPI

Social movements primarily take the form of non-institutionalised collective political action which strive for political and/or social change. While India has witnessed many such movements over the centuries, it is only recently that scholars have begun to study them in depth. This thoroughly

revised and updated version of a seminal book critically examines and reviews the literature concerning social movements in India from 1857 to the present. In the process he discusses the theoretical issues raised by various scholars while analysing major trends in different movements. In conclusion, he suggests areas for future research.

Frontier Computing Springer
Individuals, groups, and societies all experience and resolve conflict. In this handbook, scholars from multiple

disciplines offer perspectives on the current state and future challenges in negotiation and conflict resolution. This confluence of research perspectives will identify further synergies and advances in our understanding of conflict resolution. *The Oxford Handbook of Economic Conflict Resolution* Springer Nature
This book is a truly interdisciplinary publication, useful to scholars, social movements, practitioners and members of governmental agencies and private companies, undertaking research and/or

executing projects focusing on social responsibility and sustainability from across the world. Sustainable development has become a matter of central concern to both public institutions and enterprises. Indeed, for many companies, a due emphasis to environmental issues is not only positive from the point of view of environmental gains, but also to the image of the business. Often, but not always, this is reflected in the preparation of formal strategies and programmes, which entail their institutional strategies and visions. The wide area of social responsibility, often known as Corporate Social Responsibility (CSR), entails elements of social equality and environmental accountability, and eco-efficiency. Due to their complexity, the interrelations between social responsibility and sustainable development need to be better understood. There is also a real need to showcase successful examples of how public institutions and companies are handling their sustainability challenges. It is against this background that this book has been produced.

Applications of Next Generation Biosurfactants in the Food Sector Oxford

University Press

A multidisciplinary index covering the journal literature of the arts and humanities. It fully covers 1,144 of the world's leading arts and humanities journals, and it indexes individually selected, relevant items from over 6,800 major science and social science journals.

Toward a Science Policy for the United States, Report of the Subcommittee on Science, Research, and Development to the ... October 15, 1970 Frontiers Media SA

This book discusses the latest findings towards ensuring people's safety, health, and welfare at work. It crosses different disciplines, such as work physiology, health informatics, workplace design, injury prevention, and occupational psychology. It presents new strategies for safety management, including accident prevention methods, such as performance testing and participatory ergonomics. The book, which is based on the AHFE 2016 International Conference on Safety Management and Human Factors, held on July 27-31, 2016, in Walt Disney World®, Florida, USA, provides readers, including decision makers in government and public

authorities, with a timely snapshot of the state of the art in the field of safety, health and welfare management. It also addresses agencies such as OSHA and NIOSH as well as other professionals dealing with occupational safety and health.

Social Europe Springer

This book presents the latest research into CSS methods, uses, and results, as presented at the 2019 annual conference of the CSSSA. This conference was held in Santa Fe, New Mexico, October 24 - 27, 2019, at the Drury Plaza Hotel. What follows is a diverse representation of new results and approaches for using the tools of CSS and agent-based modeling (ABM) for exploring complex phenomena across many different domains. Readers will therefore not only have the results of these specific projects on which to build, but will also gain a greater appreciation for the broad scope of CSS, and have a wealth of case-study examples that can serve as meaningful exemplars for new research projects and activities. The Computational Social Science Society of the Americas (CSSSA) is a professional society that aims to advance the field of CSS in all its areas,

from fundamental principles to real-world applications, by holding conferences and workshops, promoting standards of scientific excellence in research and teaching, and publishing novel research findings.

Sustainable Governance in Northeast Asia: Challenges for Innovation Frontier Springer

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable

compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, *Vox* “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak

and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Frontier on the Rio Grande Penguin

This book is the very first book-length study devoted to the advances in technological development and systems research in cooperative economics. The chapters provide, first of all, a coherent framework for understanding and applying the concepts and approaches of complexity and systems science for the advanced study of cooperative networks and particular cooperative enterprises and communities. Second, the book serves as a unique source of reliable information on the frontier information technologies available for the production, consumer, credit, and agricultural cooperative enterprises, discussing predominant strategies, potential drivers of change, and responses to complex problems. Given the diverse range of backgrounds and advanced research results, researchers, decision-makers, and stakeholders from all fields of cooperative economics in any

country of the world will undoubtedly benefit from this book.

Drawdown Oxford University Press Digital Democracy, Social Media and Disinformation discusses some of the political, regulatory and technological issues which arise from the increased power of internet intermediaries (such as Facebook, Twitter and YouTube) and the impact of the spread of digital disinformation, especially in the midst of a health pandemic. The volume provides a detailed account of the main areas surrounding digital democracy, disinformation and fake news, freedom of expression and post-truth politics. It addresses the major theoretical and regulatory concepts of digital democracy and the 'network society' before offering potential socio-political and technological solutions to the fight against disinformation and fake news. These solutions include self-regulation, rebuttals and myth-busting, news literacy, policy recommendations, awareness and communication strategies and the potential of recent technologies such as the blockchain and public interest algorithms to counter disinformation. After

addressing what has currently been done to combat disinformation and fake news, the volume argues that digital disinformation needs to be identified as a multifaceted problem, one that requires multiple approaches to resolve.

Governments, regulators, think tanks, the academy and technology providers need to take more steps to better shape the next internet with as little digital disinformation as possible by means of a regional analysis. In this context, two cases concerning Russia and Ukraine are presented regarding disinformation and the ways it was handled. Written in a clear and direct style, this volume will appeal to students and researchers within the social sciences, computer science, law and business studies, as well as policy makers engaged in combating what constitutes one of the most pressing issues of the digital age.

Computation and Big Data for Transport Routledge

Although African ethnicity has become a highly fertile field of enquiry in recent years, most of the research is concentrated on southern and central Africa, and has passed Ghana by. This

volume extends many of the distilled insights, but also modifies them in the light of the Ghanaian evidence. The collection is multidisciplinary in scope and spans the pre-colonial, colonial and post-colonial contexts. A central contention of the volume is that, while there were significant regional variations, ethnicity was not purely a colonial 'invention'. The boundaries of 'we-groups' have constantly mutated from pre-colonial times, while European categorization owed much to indigenous ways of seeing. The contributors explore the role of European administrators and recruitment officers as well as African cultural brokers in shaping new identities. The interaction of gender and ethnic consciousness is explicitly addressed. The volume also examines the formulation of the national question in Ghana today - in debates over language policy and conflicts over land and chieftaincy.

Applications of Next Generation

Biosurfactants in the Food Sector provides detailed information on the sustainable approach to the utilization of biosurfactants as a next-generational green biotechnology to mitigate various problems encountered in the food industry. These biosurfactants help to reduce risks such as food spoilage, food poisoning, and post-harvest losses of fruits, vegetable, grains, tubers, cereals and pulses. This book will benefit academics, R&D professionals, and postgrad students in the food science and related fields as they explore recent trends in the application of these green biosurfactants and the many uses they can provide. Provides examples of mathematical modeling, metabolomics, bioinformatics, metabolic engineering, systems biology, and computer technology for solving real-life food challenges using biosurfactants Presents biosurfactants as an innovative, green, biotechnological

solution to resolving food safety issues and improving human health Includes applications of biosurfactants for the prevention of mycotoxins and as a biodegradable material with a wide variety of uses

Social Science Research R. R. Bowker

"Following a national referendum on 23 June 2016, the UK announced its intention to end its decades-long membership of the EU. That decision initiated a process of complex negotiations, governed by Article 50 of the Treaty on European Union, with a view to making the arrangements required for an "orderly Brexit". This book explores the UK's departure from the EU from a legal perspective. As well as analysing the various constitutional principles relevant to "EU withdrawal law", and detailing the main issues and problems arising during the Brexit process itself, the book provides a critical analysis of the final EU-UK Withdrawal Agreement - including dedicated chapters on the future protection of citizens' rights, the border between Ireland and Northern Ireland, and the prospects for future EU-UK relations in fields such as trade and security"--

Harrassowitz Verlag

As we grapple with how to respond to some of the world's most pressing problems, such as inequality, poverty and climate change, there is growing global interest in 'social innovation' as a potential solution. But what exactly is 'social innovation'? This book describes three ways to theorise social innovation when seeking to manage and organize for both social and economic progress.

"This book presents theoretical and empirical research on the value of information technology in healthcare"--
Provided by publisher.

Social Sciences Index Routledge

This volume gathers selected peer-reviewed papers presented at the XXVI

International Joint Conference on Industrial Engineering and Operations Management (IJCIEOM), held on July 8-11, 2020 in Rio de Janeiro, Brazil. The respective chapters address a range of timely topics in industrial engineering, including operations and process management, global operations, managerial economics, data science and stochastic optimization, logistics and supply chain management, quality management, product development, strategy and organizational engineering, knowledge and information management, work and human factors, sustainability, production engineering education, healthcare operations management, disaster management, and more. These topics broadly involve fields like operations, manufacturing, industrial and production engineering, and management. Given its scope, the book offers a valuable resource for those engaged in optimization research, operations research, and practitioners alike.

Therapeutic Process and Well-Being in Forensic Psychiatry and Prison Edward Elgar Publishing

This book gathers the outcomes of the

second ECCOMAS CM3 Conference series on transport, which addressed the main challenges and opportunities that computation and big data represent for transport and mobility in the automotive, logistics, aeronautics and marine-maritime fields. Through a series of plenary lectures and mini-forums with lectures followed by question-and-answer sessions, the conference explored potential solutions and innovations to improve transport and mobility in surface and air applications. The book seeks to answer the question of how computational research in transport can provide innovative solutions to Green Transportation challenges identified in the ambitious Horizon 2020 program. In particular, the respective papers present the state of the art in transport modeling, simulation and optimization in the fields of maritime, aeronautics, automotive and logistics research. In addition, the content includes two white papers on transport challenges and prospects. Given its scope, the book will be of interest to students, researchers, engineers and practitioners whose work involves the implementation of Intelligent Transport Systems (ITS) software for the optimal use of roads,

including safety and security, traffic and travel data, surface and air traffic management, and freight logistics.

Digital Democracy, Social Media and Disinformation Academic Press

This book presents the proceedings of the 6th International Conference on Frontier Computing, held in Kuala Lumpur, Malaysia on July 3-6, 2018, and provides comprehensive coverage of the latest advances and trends in information technology, science and engineering. It addresses a number of broad themes, including communication networks, business intelligence and knowledge management, web intelligence, and related fields that inspire the development of information technology. The contributions cover a wide range of topics: database and data mining, networking and communications, web and internet of things, embedded systems, soft computing, social network analysis, security and privacy, optical communication, and ubiquitous/pervasive computing. Many of the papers outline promising future research directions. The book is a valuable resource for students, researchers and professionals, and also

offers a useful reference guide for newcomers to the field.
