 In this "provocative primer on the nature versus nurture debate" ("Mirabella"), psychologist and noted journalist Robert Karen offers fresh insights into some of the most fundamental questions of emotional life. He traces the history of attachment theory through the controversial work of John Bowlby, a British psychoanalyst, and Mary Ainsworth, an American developmental psychologist, who together launched a revolution in child psychology.

 In this classic text, the first full-scale application of cognitive science to politics, George Lakoff analyzes the unconscious and rhetorical worldviews of liberals and conservatives, discovering radically different but remarkably consistent conceptions of morality on both the left and right. For this new edition, Lakoff adds a preface and an afterword extending his observations to major ideological conflicts since the book's original publication, from the impeachment of Bill Clinton to the 2000 presidential election and its aftermath.

The volume's topic was chosen in part because of the rapidly growing salience of dyadic research perspectives in developmental psychology, but also in social psychology and in fields such as communication and family studies. It provides the most complete representation now available on current theory and research on the significance of personal relationships in child and adolescent development. This volume addresses the ways in which the study of social development has been altered by an emphasis on research questions and techniques for studying children and adolescents in the context of their significant dyadic relationships. Leading scholars--many of them pioneers in the concepts and methods of dyadic research--have contributed chapters in which they both report findings from recent research and reflect on the implications for developmental psychology. Their work encompasses studies of relationships with parents, siblings, friends, and romantic partners. Opening chapters set the stage by describing the key characteristics of social-development research

from a dyadic perspective and outlining key themes and contemporary issues in the field. It concludes with commentaries from distinguished senior scholars identifying important directions for future research.

This issue explores some of the ways in which gender, as a social construction, might be rooted in and contingent on conversational processes in childhood. The interconnections between language and gender in three key developmental sociolinguistic contexts are examined: talk between parent and child, talk among friends, and talk between siblings. When children learn to speak a language, they also learn to use it in ways that can reflect, resist, or ignore their culture's norms of acceptable feminine and masculine behavior. The authors of these articles explore the concept of talk as a medium in which both young children and the adults in their world "do" gender. This collection should act as a springboard for more thinking about ways to untangle gender and context, and to show their interconnectedness as well.
