Anatomy Courier Corporation

A lavishly illustrated compendium of the art and history of animal anatomy from antiquity to today. For more than two thousand years, comparative anatomy—the study of anatomical variation among different animal species—has been used to make arguments in natural philosophy, reinforce religious dogma, and remind us of our own mortality. This stunningly illustrated compendium traces the intertwined intellectual and artistic histories of comparative anatomy from antiquity to today. *Stripped Bare* brings together some of the most arresting images ever produced, from the earliest studies of animal form to the technicolor art of computer-generated anatomies. David Bainbridge draws on representative illustrations from different eras to discuss the philosophical, scientific, and artistic milieus from which they emerged. He vividly describes the unique aesthetics of each phase of anatomical endeavor, providing new insights into the exquisite anatomical drawings of Leonardo and Albrecht Dürer in the era before printing, Jean Héroard's cutting and cataloging of the horse during the age of Louis XIII, the exotic pictorial menageries of the Comte de Buffon in the eighteenth century, anatomical illustrations from Charles Darwin's voyages, the lavish symmetries of Ernst Haeckel's prints, and much, much more. Featuring a wealth of breathtaking color illustrations

throughout, *Stripped Bare* is a panoramic tour of the intricacies of vertebrate life as well as an expansive history of the peculiar and beautiful ways humans have attempted to study and understand the natural world.

George Brant Bridgman (1865-1943) was a Canadian-American painter, writer, and teacher in the fields of anatomy and figure drawing. Bridgman

taught anatomy for artists at the Art Students League of New York for some 45 years. *Constructive Anatomy: Illustrated by George B. Bridgman.* Excellent book of anatomical drawing instruction. Ideal for beginning to intermediate artists, begins with instruction on drawing hands and works its way through the human body giving detailed instruction on how to draw realistic human figures. The drawings that are presented here show the conceptions that have proved simplest and most effective in constructing the human figure. The eye in drawing must follow a line or a plane or a mass. In the process of drawing, this may become a moving line, or a moving plane, or a moving mass. The line, in actual construction, must come first; but as mental construction must precede physical, so the concept of mass must come first, that of plane second, that of line last. Masses of about the same size or proportion are conceived not as masses, but as one mass; those of different proportions, in respect to their movement, are conceived as wedging into each other, or as morticed or interlocking.
