WEBB STOUT

American Men of Science Elsevier
 Festkörper Probleme IX: Advances in Solid State Physics presents a model for the behavior of electrons in non-crystalline materials. This book describes some experimental evidence that supports for the behavior of electrons. Organized into 16 chapters, this book begins with an overview of crystallization, glass forming, and melting processes in systems forming chalcogenide glasses. This text then describes the theory of the transport properties of electrons in non-crystalline solids and liquids. Other chapters consider the optical and electrical properties of amorphous semiconductors wherein the treatment is mainly restricted to the elements selenium, germanium, and tellurium. This book discusses as well the basic aspects of the optical phenomena of the Jahn-Teller effect, with emphasis on some criteria of the strength and observability of the Jahn-Teller effect. The final

chapter deals with the methods for processing emulsion and metal film masks. This book is a valuable resource for solid state physicists.

A Dictionary of the English Language Lloyd's Register
 The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

Construction Reports Elsevier

The explosive growth of organoselenium chemistry over the past 12 years can be attributed to the specific properties of organic selenium molecules, which fit the requirements of modern organic synthesis. Most of them are well adapted to chemo-, regio- and stereo-selectivities. In addition, they can be used in mild experimental conditions which are compatible with the

stability of both substrates and products in the preparation of unsaturated and functional complex molecules, especially in the field of natural products. This book describes and illustrates different synthetic routes to organic structures using selenium reagents or intermediates. The approach emphasizes that such transformations are simple, efficient and often carried out at room temperature. The scope ranges from the preparation of both inorganic and organic selenium reagents, through descriptions of structure, toxicity, biological aspects and nuclear magnetic resonance, to applications of specific selenium compounds in various syntheses including natural products and biologically active compounds.

Pharm-AID

Contains a summarization of market quotations which have appeared in the National Daily services, or have been supplied by dealers on special lists.

The China Sea Directory

Indexed references to all entries published in Unlisted drugs. Arranged under Index of drug names and Index of drug numbers. Entries refer to volume and page of original citations. Includes comprehensive manufacturers' directory, and list of recent books on drugs. 1st ed., 1969, contains 45,000 references to entries

from Unlisted drugs, v. 1, Jan., 1949, through v. 19, Dec., 1967
